

Course Description

VistaFoundation® CI 4.0 Solution Development

Duration: 5 days

VistaFoundation Centralized Inventory (VF-CI) is the adaptive technology platform from InfoVista® for service-centric IT performance reporting. This course teaches experienced VF-CI users how to create a custom solution. Starting with an empty configuration, students will gradually build up a total solution for VF-CI reporting on network servers.

Students will create an InfoVista library that defines the KPIs, a VistaMart® library that defines the reporting rules and, finally, a set of Portal pages with custom report templates to display the data. At each stage of the course, hands-on lab work will reinforce the students' knowledge.

While the course concentrates on the development of a total solution, students will also be able to use this knowledge to customize existing VF-CI deployments. This course is based on the 4.0 product versions of the VistaFoundation components.

Student Profile

This course is designed for technical audiences. Developers will need this course to be able to create and customize VF-CI solutions. System architects will find this course useful in order to understand the possibilities of the system.

Prerequisites and Related Courses

Prerequisite to this course is the 'VistaFoundation CI 4.0 Operation & Troubleshooting' course. The practical knowledge gained in that course is necessary to successfully follow the 'VistaFoundation CI 4.0 Solution Development' course. It also is assumed that students have a good working knowledge of network management and the use of Windows applications.

Course Objectives

After completing this course, students will be able to:

- Create an InfoVista library containing Report Templates and Indicators (KPIs) which generate the source data
- Create a VistaMart library containing provisioning rules which define the data collection policy
- Create VistaPortal® pages and Report Templates which display data to the end user
- Personalize the look and feel of the Portal pages to conform to corporate graphic charters.

By applying the skills and concepts taught in this course, you will be able to successfully develop a new VF-CI solution.

Course Registration

To register for this course:

1. Select Services/Training/Schedule & Registration from www.infovista.com
2. Select the region for the desired course
3. Select the desired course and date
4. Click on 'Register for this Course'
5. Complete the Training Registration Form and click 'Submit'.
