

COURSE DESCRIPTION

VistaInsight® Report Designer

Duration: 2 days

Course overview

VistaInsight® is a unified multi-domain service assurance solution that supports your digital transformation by simplifying hybrid NFV network operations and supporting your enterprise SLAs. Through end-to-end service visualization and service modelling, VistaInsight® aligns with the state of the network, normalizes multi-vendor KPIs, builds effective service policies, and enriches big data analytics. VistaInsight® diagnoses and orchestrates network and service performance and reports it in a single pane of glass so that you can resolve your problems more efficiently.

This course teaches experienced VistaInsight® users how to design the content to be displayed in VistaPortal. Starting with pre-configured platform, students will create a set of portal pages with custom report templates to display the data. At each stage of the course, hands-on lab work will reinforce the students' knowledge.

Student Profile

This course is designed for advanced users. Developers will need this course to be able to create and customize VistaInsight® pages and reports.

Prerequisites and Related Courses

Before registering to this course, ensure you have completed the 'VistaInsight® Platform Administrator'. The practical knowledge gained in this course is necessary to successfully
